Read before using

Be sure to read this manual carefully before using the product. After you read it, store it in a safe place so that you can reread it when necessary.

- Contents of this manual may be changed without notice.
- Reproducing and/or copying the contents of this manual by any means without permission are prohibited.
- We will not be responsible for any adverse occurrence that results from the use of this manual, regardless of whether it contains omissions, errors/misprints, etc.
- Note that we will not be responsible for (a) loss caused by improper operation or mishandling of the device by the user, or (b) loss due to operational environment.
- Data etc., are basically impermanent; long time or permanent storing/saving of data by the device is not possible.
- Note that we will not be responsible for any loss or loss of profits owing to loss of data due to breakdown, repairs, inspections, etc.
- Please contact us if there are omissions, errors, ambiguities, etc. in this manual.
- Refer to this document along with the user manual of the printer.

Trademarks

- Microsoft, Windows 8, Windows 10 and Windows 11 are registered trademarks of Microsoft Corporation U.S.A. Other company names and product names mentioned here are trademarks or registered trademarks of those companies.

1. Introduction

The standalone printing capability "Standalone Forms" allows you to print labels by using label formats stored in the printer unit by inserting variable data.

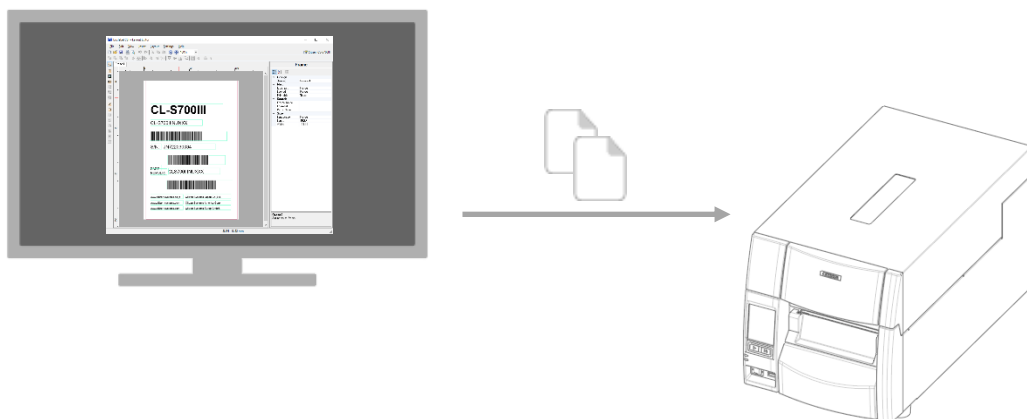

Label formats are created in advance using label design software installed on a PC and are saved in the printer. The printer does not need to be connected to a PC or network during operation. The label formats saved in the printer can be selected from the LCD panel of the printer. A barcode scanner or a USB flash drive connected to the printer can be used to input variable data. This feature is ideal for requirements where you want to use several label formats, but want to insert variable data and operate without a host device.

1-1. Overview

There are two phases to using Standalone Forms, "Preparation" and "Operation".

"Preparation"

Create a label design using the CITIZEN's label design software, "Layout Editor" installed on your PC. The created label design can be saved in the printer directly from the Layout Editor as a Standalone Forms label format.

"Operation"

There are three types of operation.

- (1) Scanned Data Printing
- (2) CSV File Conversion Printing
- (3) CSV File Batch Printing

- (1) Scanned Data Printing ... to use data read from a USB barcode scanner attached to the printer or from a print interface (USB, serial, parallel, LAN) as variable data for labels.

- (2) CSV File Conversion Printing ... to use data read from a USB barcode scanner or from a print interface as (1), but the data read is used as a search key to find and print the target data from a CSV file saved in the printer. The CSV file is used as database.

- (3) CSV File Batch Printing ... to print all the data in a CSV file in a USB flash drive attached to the printer. The CSV file is used as database.

1 Introduction

1-2. Supported Printer Model

The printer model that can use this feature is as follows.

CL-S700III

1-3. Supported Input Device

The input devices that can be used to operate this feature are as follows.

USB barcode scanner

Model Name	Description
SCN01-Z1D	1D barcode scanner
SCN02-Z2D	2D barcode scanner
BC-NL3000U	2D barcode scanner

HID or VCOM mode can be used for the barcode scanner, but the VCOM mode is recommended when handling barcodes with large data such as QR code. Refer to the user's manual of the USB barcode scanner for how to switch the operation mode.

USB flash drive

There is no specific recommended model, but be sure to format in FAT32.

1-4. Label Format Creating/Saving Application

The following application is used to create label formats and save them to the printer.

Layout Editor version 1.5.0.0 or greater
--

Refer to "LayoutSDK_UsersGuide_en.pdf" for the system requirements to run Layout Editor.

2. Preparation

2-1. Connecting the Printer

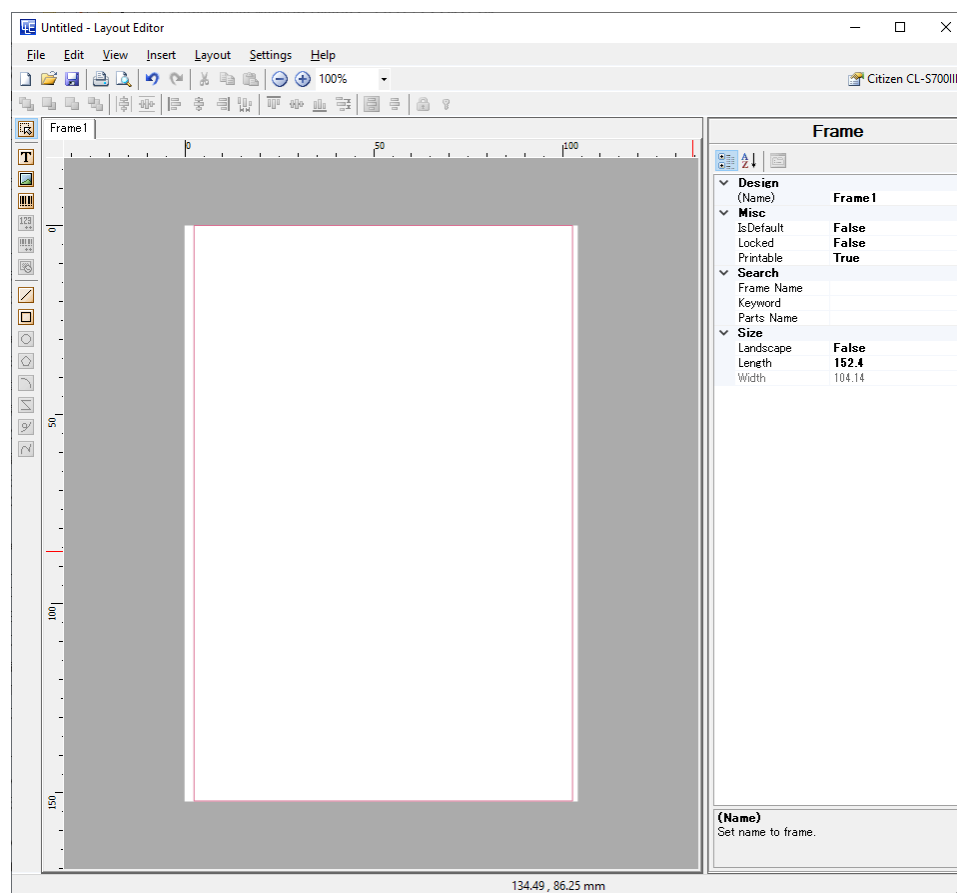

First of all, install the Windows printer driver for the printer and connect the printer to the PC so that it is ready to print. Any interface (USB, serial, parallel, LAN) can be used for connection.

2-2. Designing Labels

Label design is done with Layout Editor, an application installed on a Windows PC.

Start up Layout Editor.

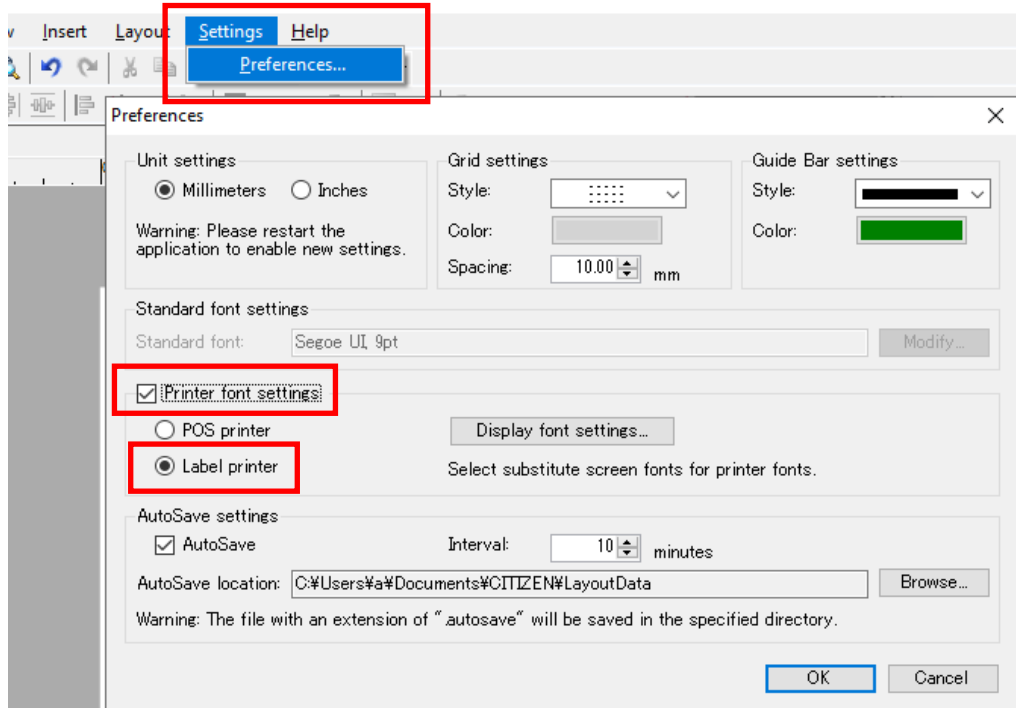

2 Preparation

2-2-1. Settings

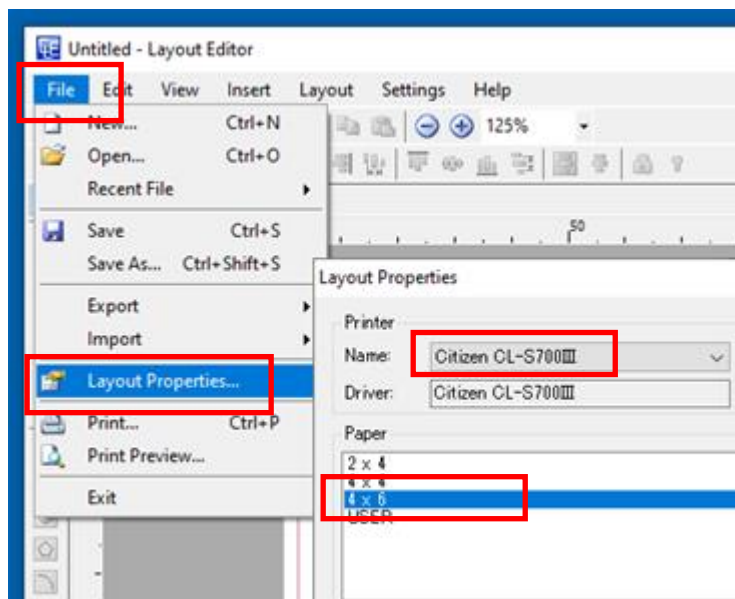

Before starting label design, set up the following three options.

- (1) Go to [Settings>Preferences], check "Printer font settings" and select "Label printer".

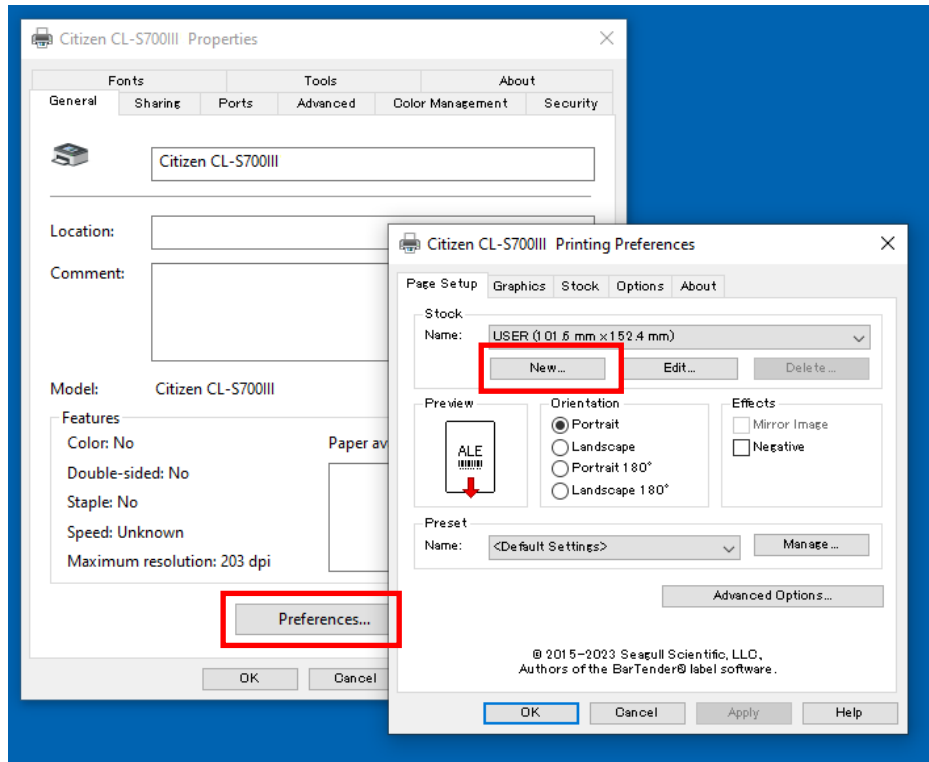

- (2) Go to [File>Layout Properties], select the target printer.

- (3) Go to [File>Layout Properties], select a paper size.

If you don't find a preferred paper size here, you need to define one in the Windows printer driver.

Open the Printer properties of the printer driver and define a stock size in [General>Preferences>Page Setup>Stock].

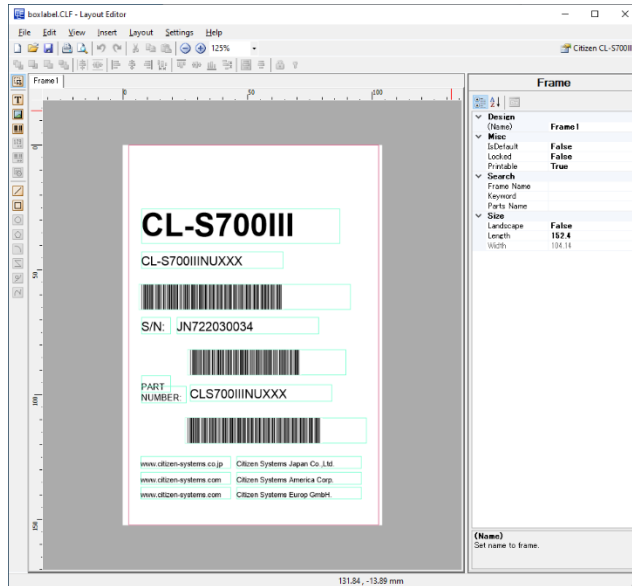

2 Preparation

2-2-2. Defining Variable Parts

Start designing.

Place text or barcode objects where you want.

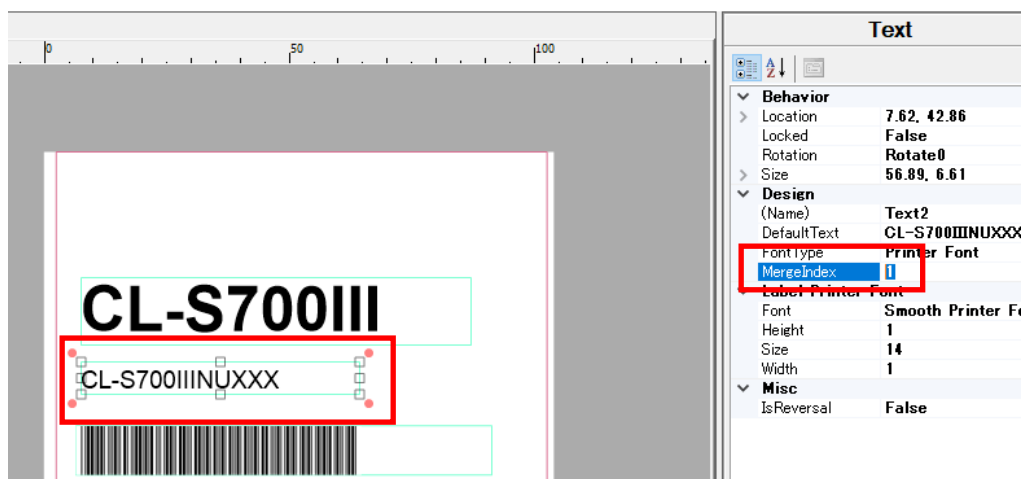

Variable parts are parts whose contents are changed dynamically by a USB barcode scanner or CSV data when printing.

For example, if you want to dynamically change the contents in the red rectangles below, set the order to populate data into each part.

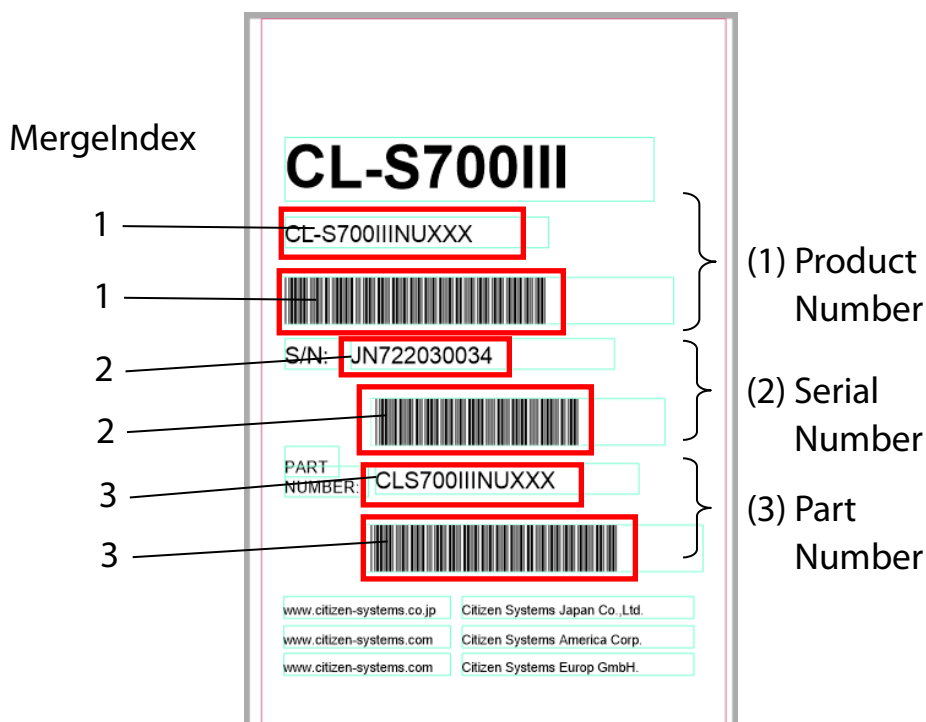

Select the parts to be changed dynamically one by one and assign a number (1-99) to each part in the "MergeIndex" in the right pane in order.

If the MergeIndex is left with the initial value of "0", the same fixed content will be printed on all labels as a static part.

A single data can be used for multiple variable parts. In this case, enter the same number in MergeIndex. For example, in the previous example, if you want to input (1) product number, (2) serial number, and (3) part number three times from the USB barcode scanner during operation, the MergeIndex for each part will be as follows.

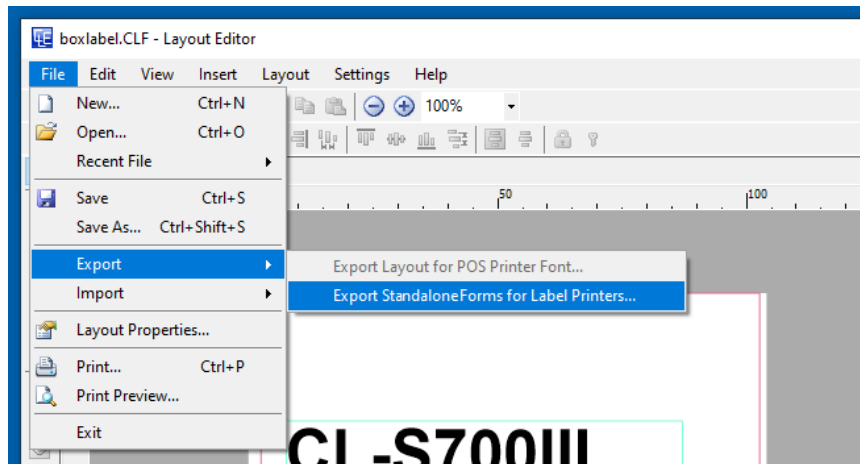

2 Preparation

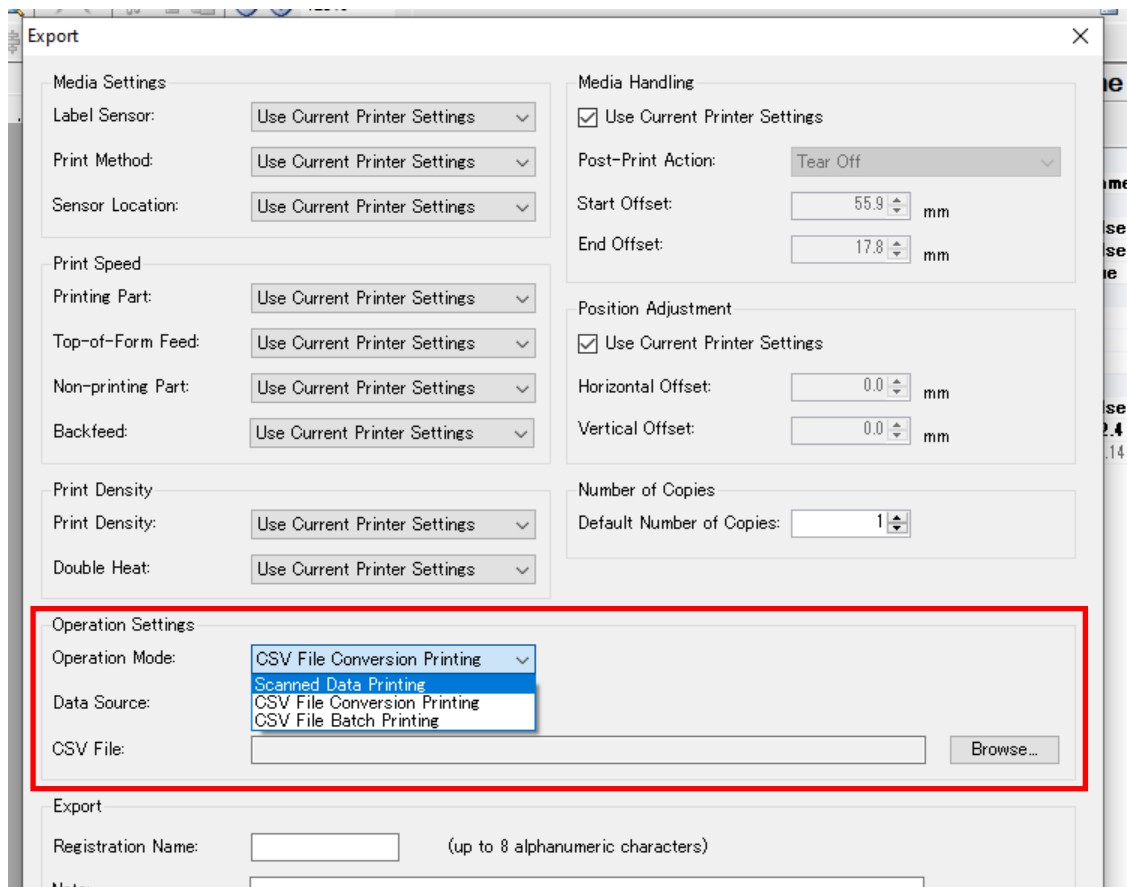

2-3. Setting Up and Saving for Standalone Forms

Once the label design is complete, save it as a label format in the printer.

To save, go to [File>Export>Export Standalone Forms for Label Printers...].

Select an Operation Mode for your preferred operation.

The examples in the next sections explain details of each type of operation.

2-3-1. Scanned Data Printing

This is the example used in "[2-2-2. Defining Variable Parts](#)". You are trying to read data from a USB barcode scanner three times, and populate them into a label format to print a label.

In this case, the Operation Mode is "Scanned Data Printing" and the Data Source is "USB Barcode Scanner".

Operation Settings

Operation Mode:

Data Source:

CSV File:

Export

Registration Name: (up to 8 alphanumeric characters)

Note:

Register a Standalone Forms to the printer

Save a Standalone Forms to the file

Enter a "Registration Name" and, if necessary, a "Note". This information will be displayed on the LCD screen of the printer. See "[3. Operation](#)" for details.

Press "Register" to send the label format to the printer to save.

Press "Test Print" to print one on the actual label before saving the label format in the printer. If the design needs an adjustment, press "Cancel" to return to the design screen and adjust the design.

2 Preparation

2-3-2. CSV File Conversion Printing

You are trying to save a list of purchase orders in CSV file format in your printer in advance, read one PO number you want to print with a USB barcode scanner, and print the corresponding PO data.

The CSV is UTF-8 encoded and comma-delimited, and the column you want to use as the search key is placed at the beginning of the line.

The number of characters that can be handled in one line (record) is up to 2048 bytes. (2048 alphanumeric characters. Note that this decreases to 1/3 in UTF-8.)

The order of the columns is used as the order of the MergeIndex.

In this case, the Operation Mode is "CSV File Conversion Printing" and the Data Source is "USB Barcode Scanner".

The screenshot shows a dialog box titled "Operation Settings". It has two main sections: "Operation Settings" and "Export".

Operation Settings:

- Operation Mode:** A dropdown menu showing "CSV File Conversion Printing".
- Data Source:** A dropdown menu showing "USB Barcode Scanner".
- CSV File:** A text field containing "C:\DATABASE.CSV" and a "Browse..." button to its right.

Export:

- Registration Name:** A text field containing "CSV" with a note "(up to 8 alphanumeric characters)" to its right.
- Note:** A text field containing "Order Lookup Printing".
- Buttons:** Below the text fields are two buttons: "Register" and "Save...".
- Descriptions:** To the right of the buttons are two lines of text: "Register a Standalone Forms to the printer" and "Save a Standalone Forms to the file".

Footer: At the bottom right of the dialog box are three buttons: "Test Print", "OK" (which is highlighted with a blue border), and "Cancel".

For "CSV File", select a file saved on your PC.

Enter a "Registration Name" and, if necessary, a "Note". This information will be displayed on the LCD screen of the printer. See ["3. Operation"](#) for details.

Press "Register" to send the label format and the CSV file to the printer to save.

Press "Test Print" to print one on the actual label before saving the label format in the printer. If the design needs an adjustment, press "Cancel" to return to the design screen and adjust the design.

2 Preparation

2-3-3. CSV File Batch Printing

You are trying to save a list of purchase orders in CSV file format in a USB flash drive and print all the data in a batch process.

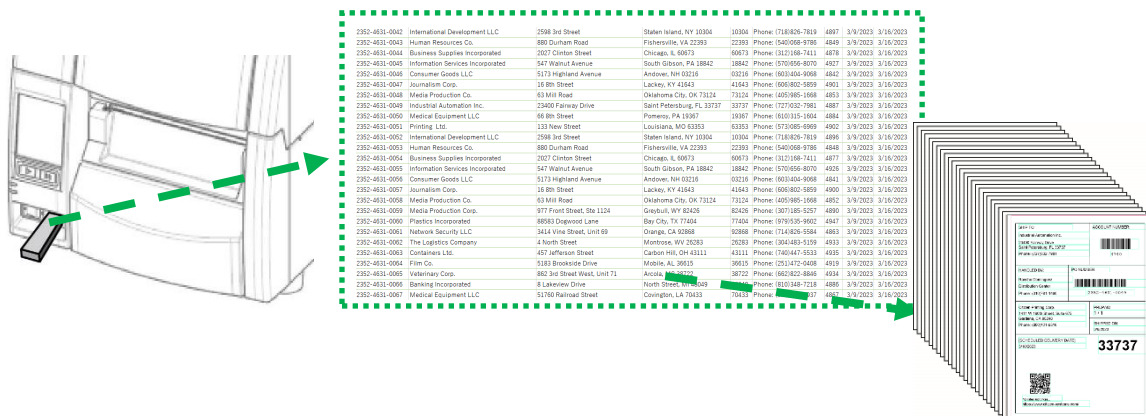

Same as "[2-3-2. CSV File Conversion Printing](#)", the CSV is UTF-8 encoded and comma-delimited.

The number of characters that can be handled in one line (record) is up to 2048 bytes. (2048 alphanumeric characters. Note that this decreases to 1/3 in UTF-8.)

The order of the columns is used as the order of the MergeIndex.

During operation, the entire CSV file data in the USB flash drive attached to the printer is used for printing.

In this case, the Operation Mode is "CSV File Batch Printing" and the Data Source is "USB Memory".

The screenshot shows a configuration window with two main sections: "Operation Settings" and "Export".

Operation Settings:

- Operation Mode: CSV File Batch Printing (dropdown menu)
- Data Source: USB Memory (dropdown menu)
- CSV File: [Empty text box] with a "Browse..." button to the right.

Export:

- Registration Name: CSVB (text box) with a note "(up to 8 alphanumeric characters)" to its right.
- Note: Order Batch Printing (text box)
- Buttons: "Register" and "Save..."
- Descriptions: "Register a Standalone Forms to the printer" and "Save a Standalone Forms to the file"

At the bottom right, there are three buttons: "Test Print", "OK" (highlighted with a blue border), and "Cancel".

Enter a "Registration Name" and, if necessary, a "Note". This information will be displayed on the LCD screen of the printer. See ["3. Operation"](#) for details.

Press "Register" to send the label format to the printer to save.

Press "Test Print" to print one on the actual label before saving the label format in the printer. If the design needs an adjustment, press "Cancel" to return to the design screen and adjust the design.

Format a USB flash drive in FAT32 and save a CSV file with the following folder and file name.

USB Memory

- └─ CLS
 - └─ DATABASE.CSV

The volume label name ("USB Memory" in the above example) can be anything.

3. Operation

3-1. Starting up Standalone Forms and Selecting a Label Format

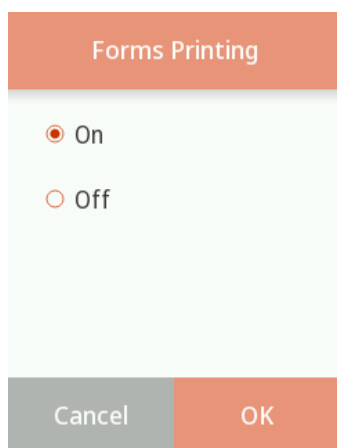

To use Standalone Forms, "Emulation Select" must be set to "DMI" in the printer.

Make sure, in the printer menu, [Setup>System Setup>Emulation Select] is set to "DMI".

Also, "Standalone Forms Printing" must be set to "On".

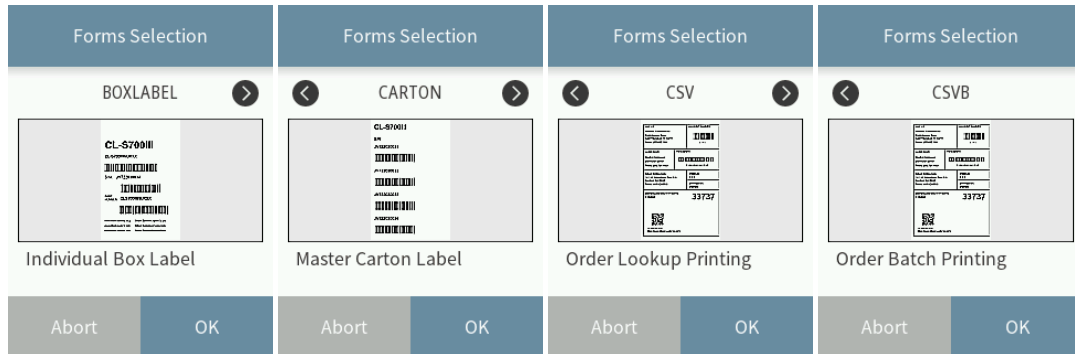

Make sure, in the printer menu, [Setup>Standalone Forms>Forms Printing] is set to "On".

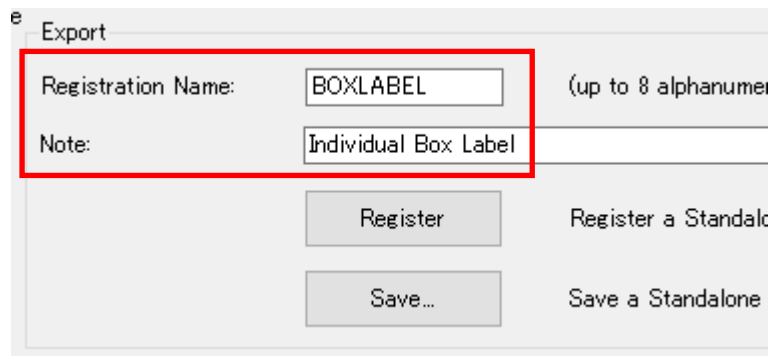

If you have saved label formats from the Layout Editor as described in the previous chapter, the above settings have already been made.

If you have saved label formats in the printer as described in the previous chapter, the printer will automatically show the label format selection screen at startup.

If there are multiple label formats, you can see others by pressing the right/left arrows on the LCD screen.

The Registration Name and the Note shown on the screen are what you set when exporting label formats in the Layout Editor.

You can also set the printer to start with a specific label format by selecting one from multiple label formats. For details, see "[3-3-2. Starting Up with a Specific Label Format](#)".

3 Operation

3-2. Operation

3-2-1. Scanned Data Printing

Connect the USB barcode scanner to the printer.

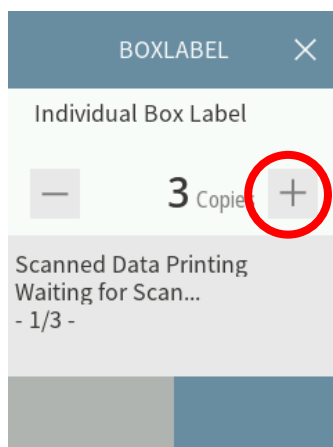

Avoid using a USB hub or similar device as a relay to connect to the printer.

After selecting a label format on the "Forms Selection" screen, it goes into the scanning stand-by state.

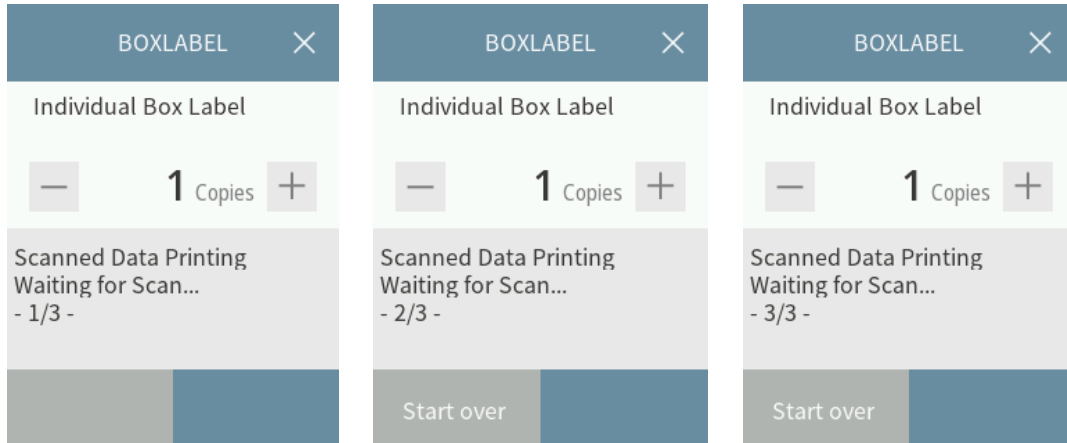

To print identical copies of the labels, press "+" on the LCD screen to increase the number before scanning.

You will scan as many as MergeIndex you set to variable parts in Layout Editor when creating the label format. The number of times you have scanned is shown as a numerator of the fraction on the LCD screen.

For example, if you have three MergeIndex, they will be shown as follows.

The numerator of the fraction increases with each scan and indicates how many times you have scanned. If you have scanned by mistake, press "Start Over" to start from the beginning.

After scanning for the prepared MergeIndex, printing begins.

3 Operation

When printing is done, it goes back to the scanning stand-by state.

To exit Standalone Forms printing, press the "X" in the right upper corner of the LCD screen, then press "OK".

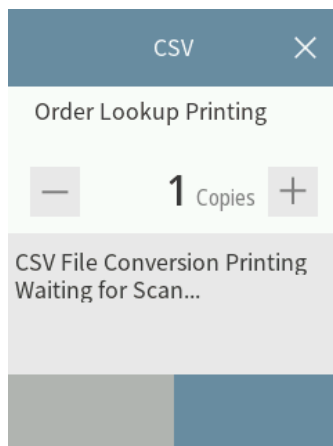

3-2-2. CSV File Conversion Printing

Connect the USB barcode scanner to the printer.

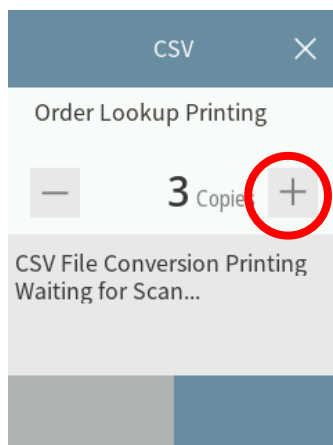

Avoid using a USB hub or similar device as a relay to connect to the printer.

After selecting a label format on the "Forms Selection" screen, it goes into the scanning stand-by state.

To print identical copies of the labels, press "+" on the LCD screen to increase the number before scanning.

3 Operation

Scan for key data that you want the printer to look up.

If the target data is found in the saved CSV file, printing begins.

If no matching data is found, an error message shows up.

To exit Standalone Forms printing, press the "X" in the right upper corner of the LCD screen, then press "OK".

3-2-3. CSV File Batch Printing

Format a USB flash drive in FAT32 and save a CSV file with the following folder and file name.

USB Memory

└─ CLS

└─ DATABASE.CSV

The volume label name ("USB Memory" in the above example) can be anything.

The CSV is UTF-8 encoded and comma-delimited.

The number of characters that can be handled in one line (record) is up to 2048 bytes. (2048 alphanumeric characters. Note that this decreases to 1/3 in UTF-8.)

The order of the columns is used as the order of the MergeIndex.

1 Copies

+

CSV File Batch Printing

Waiting for Print Button...

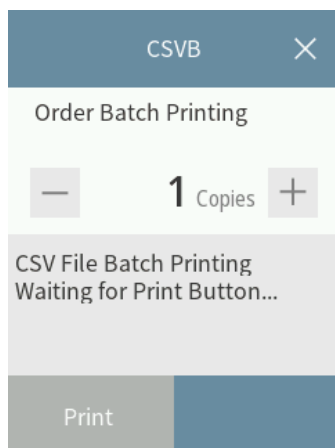

Print

3 Operation

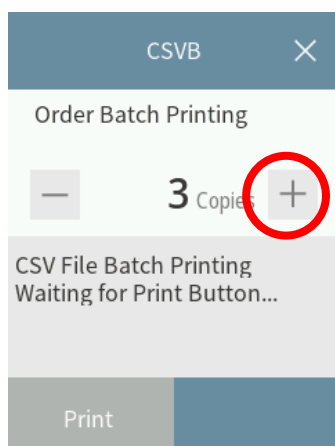

Connect the USB flash drive to the printer.

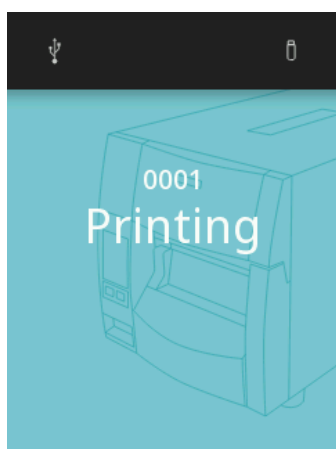

To start printing, press "Print".

To print identical copies of the labels, press "+" on the LCD screen to increase the number before printing. Note that this applies to all records in the CSV file and prints the number of copies of labels.

If there is a valid CSV file on the USB flash drive and data is found in it, printing begins.

If no data is found, an error message shows up.

Invalid folder or file names are also handled as errors.

To exit Standalone Forms printing, press the "X" in the right upper corner of the LCD screen, then press "OK".

3 Operation

3-3. Managing Files

3-3-1. Registering and Deleting Files inside Printer

[Register]

After designing a label format, you can "register" it directly from the Layout Editor in the Export window, and the associated files will be automatically transferred to the printer and saved.

The screenshot shows the 'Export' window with the following details:

- Operation Settings:**
 - Operation Mode: Scanned Data Printing (dropdown)
 - Data Source: USB Barcode Scanner (dropdown)
 - CSV File: [empty text box] with a 'Browse...' button to the right.
- Export:**
 - Registration Name: BOXLABEL (up to 8 alphanumeric characters)
 - Note: Individual Box Label
 - Register** button is highlighted with a red rectangle. To its right is the text 'Register a Standalone Forms to the printer'.
 - Save... button is below it. To its right is the text 'Save a Standalone Forms to the file'.
- Bottom Buttons:** Test Print, OK (highlighted with a blue rectangle), and Cancel.

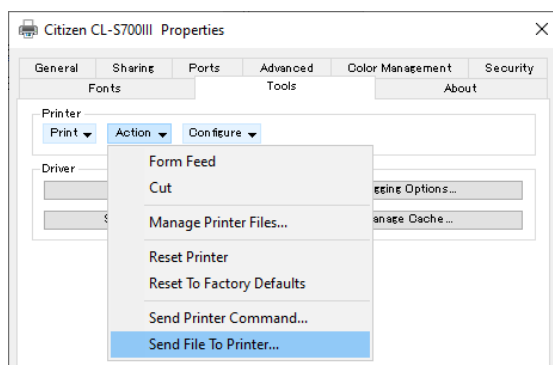

You can also "save" a file (.PRN) from the same window to your local PC, and send it to the printer later.

This screenshot is identical to the one above, showing the 'Export' window with the same settings. The only difference is that the **Save...** button is highlighted with a red rectangle, and the text 'Save a Standalone Forms to the file' is visible to its right. The 'Register' button and its associated text are also visible.

There are two ways to send the file (.PRN) for registration to the printer, (1) via the Windows printer driver and (2) via a USB flash drive.

(1) via the Windows Printer Driver

Open "Printer properties" of the Windows printer driver, go to [Tools>Printer>Action>Send File To Printer...] and select the file (.PRN) for registration. If a file with the same name exists in the printer already, it will be overwritten by the new file.

(2) via a USB flash drive

Save the registration files (.PRN) in a USB flash drive formatted in FAT32.

The following is an example of three registration files (.PRN).

USB Memory

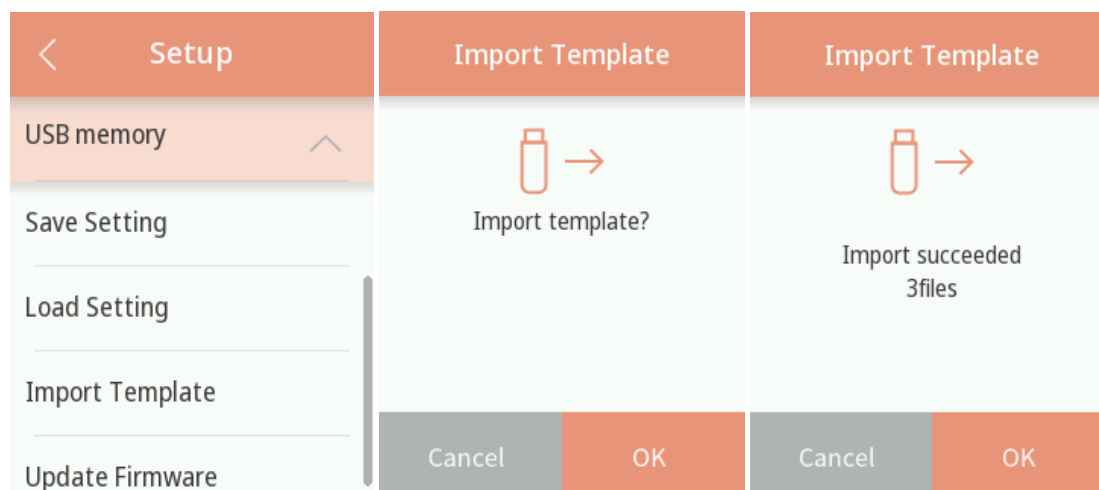

```

└─ CLS
    └─ BOXLABEL.PRN
        └─ CSV.PRN
            └─ CSVB.PRN
  
```

The volume label name ("USB Memory" in the above example) can be anything.

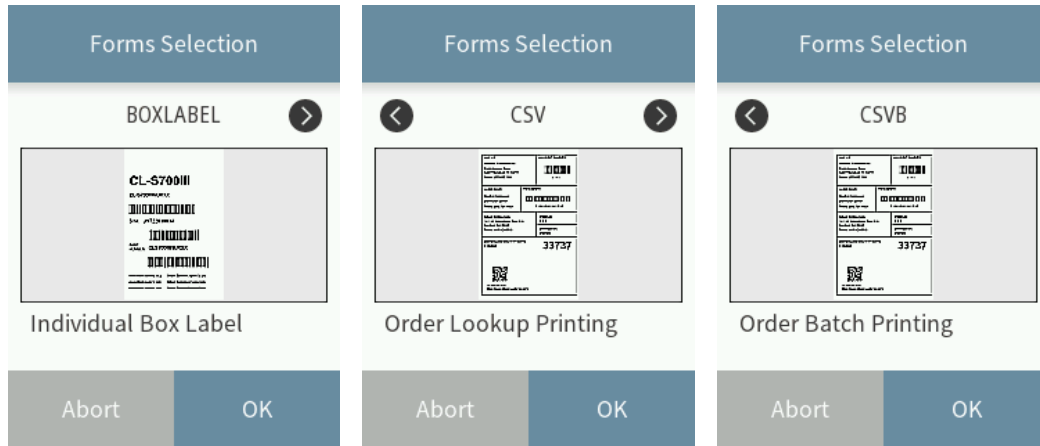

Connect the USB flash drive to the printer, in the printer menu, go to [Setup>USB Memory] and select "Import Template". Click "OK" and the associated files will be automatically transferred to the printer and saved. If files with the same names exist in the printer already, they will be overwritten by the new files.

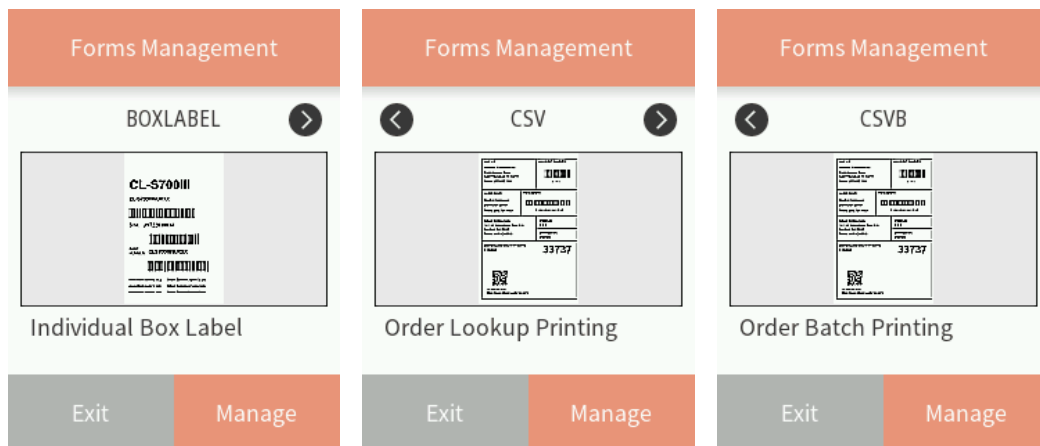

3 Operation

Registered label formats will be shown on the Forms Selection screen at startup or on the Forms Management screen.

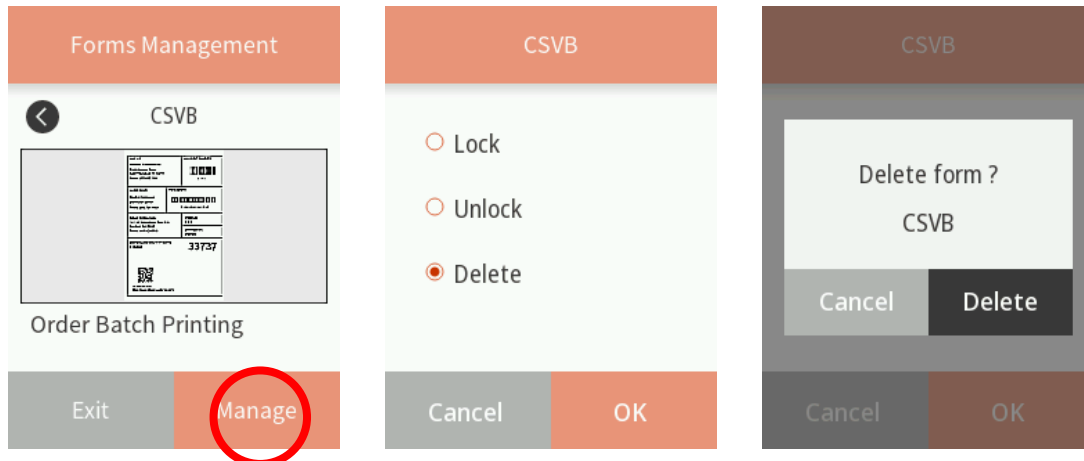

The Forms Management screen can be accessed from the printer menu, [Setup>Standalone Forms>Forms Management].

The Forms Management screen allows you to manage each label format. The following sections explain details.

[Delete]

To delete files, go to the printer menu, [Setup>Standalone Forms>Forms Management], find the label format you want to delete, press "Manage", select "Delete" and press "OK".

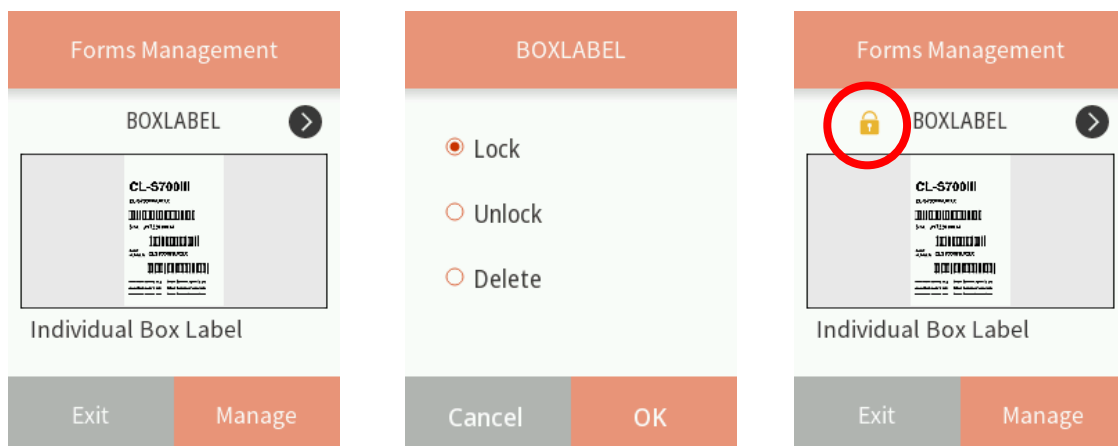

A single label format may be stored in multiple files inside the printer. The printer automatically deletes the associated files.

3-3-2. Starting Up with a Specific Label Format

If you want the printer to always start up with a specific label format even if multiple label formats are stored in the printer, select a label format and set it to "Lock".

Go to the printer menu, [Setup>Standalone Forms>Forms Management], find the label format you want to lock, press "Manage", select "Lock" and press "OK".

A lock icon will appear in the left upper corner of the selected label format.

The printer will start up with the selected label format from the next time. If you want to unlock the label format, select "Unlock" on the previous screen.
