our customers and with these words in mind.*

Connecting personal health data with doctors

We have introduced evolutionary advanced healthcare systems.

Lifestyle related diseases that typically show no external symptoms and often lead to further complications, such as heart failure and stroke, have been on the rise.

Therefore, it is crucial to undergo periodic health examinations at medical institutions as well as carryout daily health checks at home, as this increases the possibility of an early diagnosis.

To facilitate the latter and to support a healthy lifestyle, Citizen Systems supplies topnotch user-friendly healthcare products, such as digital blood pressure monitors and thermometers.

Digital Blood Pressure Monitor

What is blood pressure?

The heart is a pump that circulates blood throughout your body. Blood is pumped from the heart at a constant pressure into arteries. This pressure is called the arterial blood pressure and represents, in general terms, your blood pressure. Blood pressure is indicated by several kinds of pressures, including the systolic pressure that occurs when the heart pumps blood and the diastolic pressure that occurs when blood returns to the heart.

Your blood pressure changes all the time.

Your blood pressure differs according to your age, gender and a range of other factors. It is likely to be affected by your biorythm during the day and by your posture, physical activities, mental activities, level of stress and even by the air temperature. The blood pressure of a healthy person generally varies within a day.

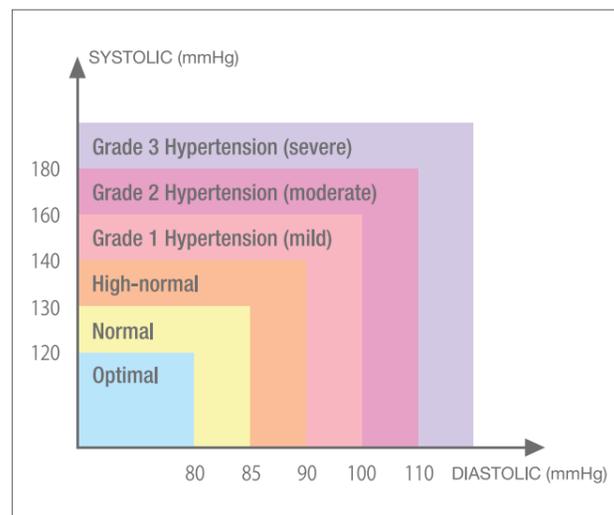

Blood pressure classifications

The figure right shows the blood pressure classifications under the WHO standards.

How to operate

CHU503, CH-456, CH-453, CH-452, CHU304, CHU305

1
Wrap the Cuff around your arm and make sure the blue marker is located in the center of your arm.

2
Place your arm on a table with your palm opened and relaxed. Press the START/STOP switch to start measurement.

3
The blood pressure generally varies in a day. Preferably, you should measure your blood pressure at the same time each day wherever possible.

Basics of Ear Thermometers

How the ear thermometer works

Every object radiates heat. The CTD504 and CTD505 have an infrared sensor built into the probe. It detects heat radiated from the eardrum and its surroundings to measure body temperature.

Performing proper measurements

For accurate measurements, it is important to straighten the ear canal and direct the tip of the probe straight toward the eardrum.
